

Boston Neighborhood Analysis

John Hennessey

May 22, 2020

I.I Introduction

This study will inspect and compare types of venues in different neighborhoods throughout Boston. It will result in venue data clustered by neighborhood. Graphs will display where a certain cuisine is most popular. The top venues in each neighborhood will also be considered and displayed.

I.II. Problem

How does a person decide where to live when they move to a new city? For this project I will assume that types of venues indicate types of culture and that a neighborhood with a person's favorite type of venues will be the best place for them to live. To solve this problem, I will analyze and group venue data by neighborhood and present each neighborhood's top cuisine choices.

I.III. Discussion

When someone decides to move to Boston, how will they know where to live? Most people who move to a new city attempt to live close to their job. Besides this requirement though, many who do not have a familiarity with the different boroughs and neighborhoods find themselves lost. After moving to a certain neighborhood, many people end up spending most of their time in a different neighborhood as it appeals to their interests and most importantly, it contains their favorite venues.

II. Data Acquisition and Cleaning

Unfortunately, I could not find all the necessary data in one place. I had to create an excel file containing the different neighborhoods of Boston and their coordinates which I found on Google. These coordinates were linked to zip codes, however some neighborhoods had multiple zip codes and some zip codes contained multiple neighborhoods. In some cases, I had to estimate the coordinates for a given neighborhood. I estimated coordinates for these neighborhoods which, when mapped, were close enough for the sake of visualization and venue prevalence estimation. The first few rows of the cleaned data frame are shown below (Table 1):

Table 1. Boston Neighborhood Location Data Frame

	Latitude	Longitude
Neighborhood		
Chinatown/Leather District	42.3515	-71.0602
West End	42.3653	-71.0646
South End	42.3378	-71.0706
Roxbury	42.3218	-71.0884
Mission Hill	42.3319	-71.0988

Using this excel file, I input the coordinates for each neighborhood into Foursquare to attain different venues within 1000m from the center of each neighborhood. The first few rows can be seen below (Table 2). The purpose was to get venues that are close enough to be easily patronized by a person who lives in a certain neighborhood. The venue does not technically need to be in the neighborhood, as long as it is within 1000m, it is relevant. This distance of 1000m was chosen because it tended to be slightly larger than the smaller neighborhoods, but still allowed for larger neighborhoods to gather most of their relevant venues. A map of the Boston Neighborhoods and 1000m radius around each one is shown below (Map 1):

Map 1. Boston Neighborhoods with 1000m radii

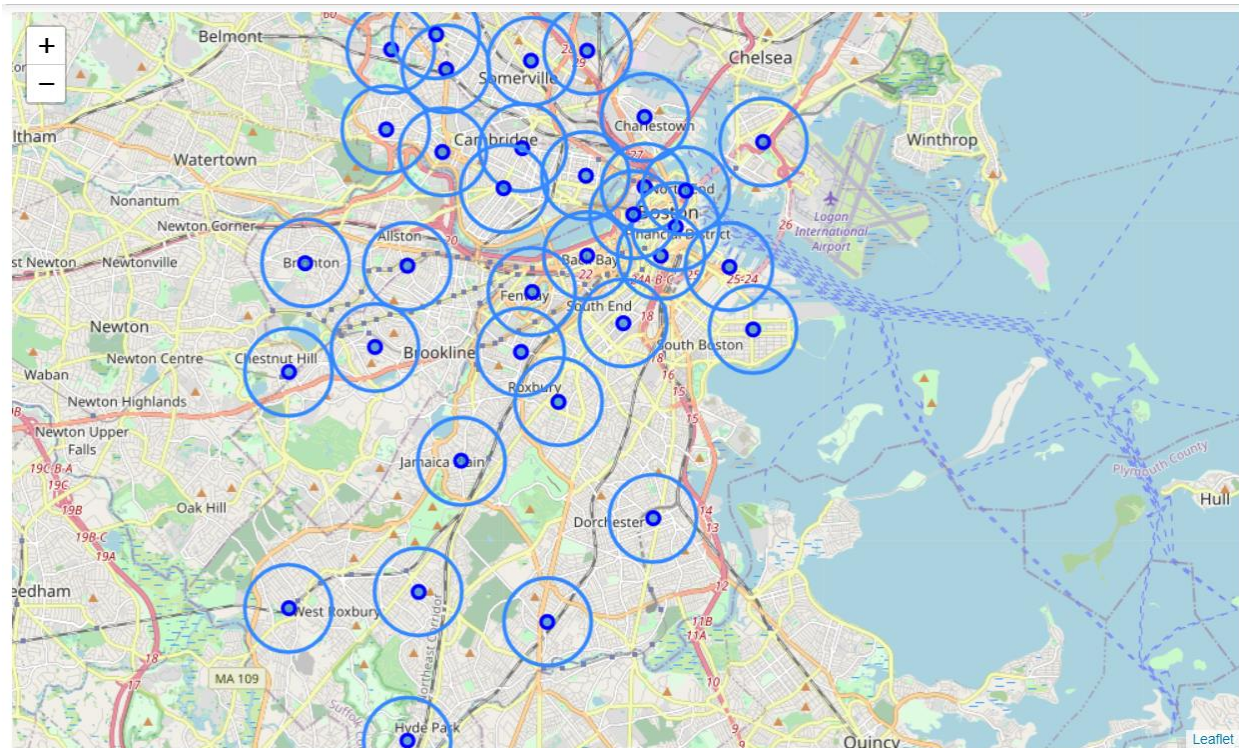

Table 2. Venues Organized by Neighborhood

	Neighborhood	Neighborhood Latitude	Neighborhood Longitude	Venue	Venue Latitude	Venue Longitude	Venue Category
0	Chinatown/Leather District	42.3515	-71.0602	Gracernote Coffee	42.351657	-71.058204	Coffee Shop
1	Chinatown/Leather District	42.3515	-71.0602	Shabu Zen	42.350922	-71.060942	Asian Restaurant
2	Chinatown/Leather District	42.3515	-71.0602	Hostelling International Boston	42.351084	-71.063398	Hostel
3	Chinatown/Leather District	42.3515	-71.0602	Barry's Bootcamp	42.354010	-71.059776	Gym / Fitness Center
4	Chinatown/Leather District	42.3515	-71.0602	Tatte Bakery & Cafe	42.353111	-71.057117	Bakery

The Foursquare Data combined with the Neighborhood Data offers insight into the venue options in each neighborhood. Using this information in combination with an individual's venue preferences, I can determine the best place for an individual to live using a model.

III. Exploratory Data Analysis

The first data exploring phase required learning about venue types. I downloaded an excel file with all of the venue types and how many of each type were found. I did the same for number of venues per neighborhood to gain more insight into the general amount of opportunity available in each neighborhood. Both of these excel files can be viewed in the Appendix (Table A and Table B respectively). The most popular venues through out Boston are Pizza Place, Park, Coffee Shop, and Italian Restaurant occurring 96, 88, 86, and 80 times respectively. Foursquare capped my venues per neighborhood at 100 and many neighborhoods hit this threshold. North Cambridge, Roxbury, and West Cambridge had the least amount of venues with 27, 27, and 26 respectively while neighborhoods close to and including Downtown all hit the 100 venue threshold.

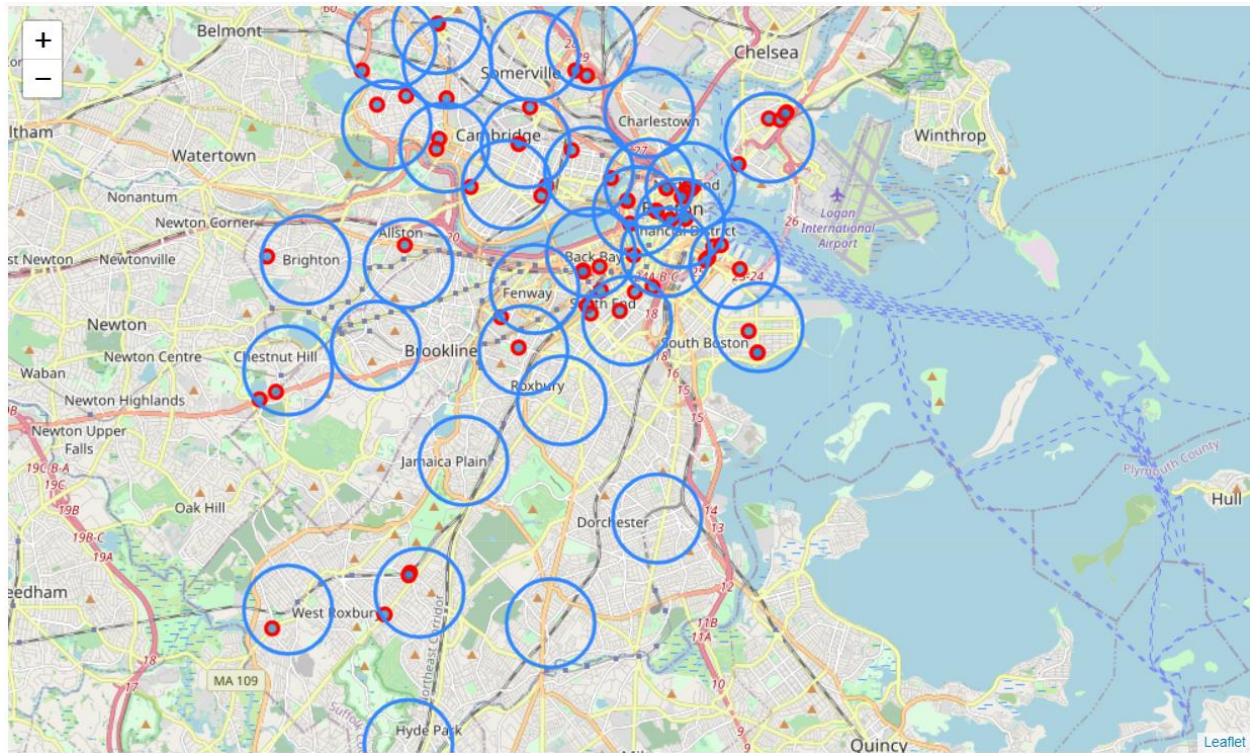

Venues in each neighborhood were organized by type. One hot encoding was performed and the top venues for each neighborhood were placed in a table. A sample is below (Table 3):

Table 3. Sample of Common Venues per Neighborhood

	Neighborhood	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue
0	Allston	Korean Restaurant	Thai Restaurant	Chinese Restaurant	Mexican Restaurant	Pizza Place
1	Assembly Square	Clothing Store	Donut Shop	Mexican Restaurant	Coffee Shop	American Restaurant
2	Back Bay	Clothing Store	Seafood Restaurant	Spa	Park	Italian Restaurant
3	Beacon Hill	Coffee Shop	Italian Restaurant	Hotel	Historic Site	French Restaurant
4	Brighton	Pizza Place	Chinese Restaurant	Bakery	Grocery Store	Sushi Restaurant
5	Brookline Village	Park	Coffee Shop	Mexican Restaurant	Hotel	Pizza Place

I also put together a map of all Italian Restaurants in Boston with neighborhood radii shown (Map 2). As you will see in the Predictive Modeling section, I perform an example analysis where Italian Restaurant is the top venue category criteria. Most of the Italian Restaurants are near Downtown or the North End (the well-known Italian Neighborhood in Boston). A map of all Italian Restaurants in Boston is shown on the next page:

Map 2. Italian Restaurants in Boston with Neighborhood Radii

These visualizations give some insight into the differences between neighborhoods in Boston. More analysis is required (and detailed in the next section) to gain actionable and clear results showing the best neighborhoods for a person given their venue category criterion.

IV. Predictive Modeling

Ultimately, I simplified this study to accept the following user inputs: five most important venues to have in the neighborhood including one “top priority” venue. Hopefully, a neighborhood exists that will have at least one instance of each of these five venues and many instances of the “top priority” venue. In order to determine if a neighborhood satisfies the “top priority” venue portion, I will check where the venue is ranked in each neighborhood. If it falls in the top 3 the requirement is satisfied (score = 1), top 5 (score = .8), top 10 (score = .6), top 20 (score = .4), outside of the top 20 (score = 0). Combining these scores with the proportion of the five venues found in the neighborhood and dividing this number by 2 will give a neighborhood ranking between 0-1. Functions were created to score each neighborhood. These rankings will make it easier to visualize how suited each neighborhood is to a person’s lifestyle.

I asked a friend to give me his top 5 venues which were 'Italian', 'Pizza', 'Ice Cream', 'Gym', and 'Coffee' with his top choice being 'Italian'. Venue Types that match his criteria are 'Italian Restaurant', 'Pizza Place', 'Ice Cream Shop', 'Gym', 'Gym / Fitness Center', 'Coffee Shop'. Back Bay and Assembly Square both had all 5 venue types in their top 20, but neither had 'Italian Restaurant' in their top 3 (Table 4). A split table can be seen below:

Table 4. Neighborhoods with All 5 Venue Category Matches

	Neighborhood	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue	11th Most Common Venue	
2	Back Bay	Clothing Store	Seafood Restaurant	Spa	Park	Italian Restaurant	Coffee Shop	Gym	Bakery	Wine Shop	New American Restaurant	Mediterranean Restaurant	
1	Assembly Square	Clothing Store	Donut Shop	Mexican Restaurant	Coffee Shop	American Restaurant	Restaurant	Sporting Goods Shop	Video Store	Ice Cream Shop	Pizza Place	Park	
	12th Most Common Venue	13th Most Common Venue	14th Most Common Venue	15th Most Common Venue	16th Most Common Venue	17th Most Common Venue	18th Most Common Venue	19th Most Common Venue	20th Most Common Venue	Main Score	Number of Matches	Match Score	Total Score
Shopping Mall	Plaza	Salad Place	Steakhouse	Ice Cream Shop	Hotel	Sushi Restaurant	Gym / Fitness Center	Jewelry Store	0.750000	5	1.000000	0.875000	
Bar	Steakhouse	Brazilian Restaurant	Gym	Café	Sandwich Place	Seafood Restaurant	Italian Restaurant	Furniture / Home Store	0.200000	5	1.000000	0.600000	

However, the South End actually scored better than these neighborhoods because it has the top criterion ‘Italian Restaurant’ as its most prevalent venue category. A split table of the top scored neighborhoods for this criterion can be seen on the next page (Table 5) (all neighborhoods were scored and can be seen in the Appendix, Table C):

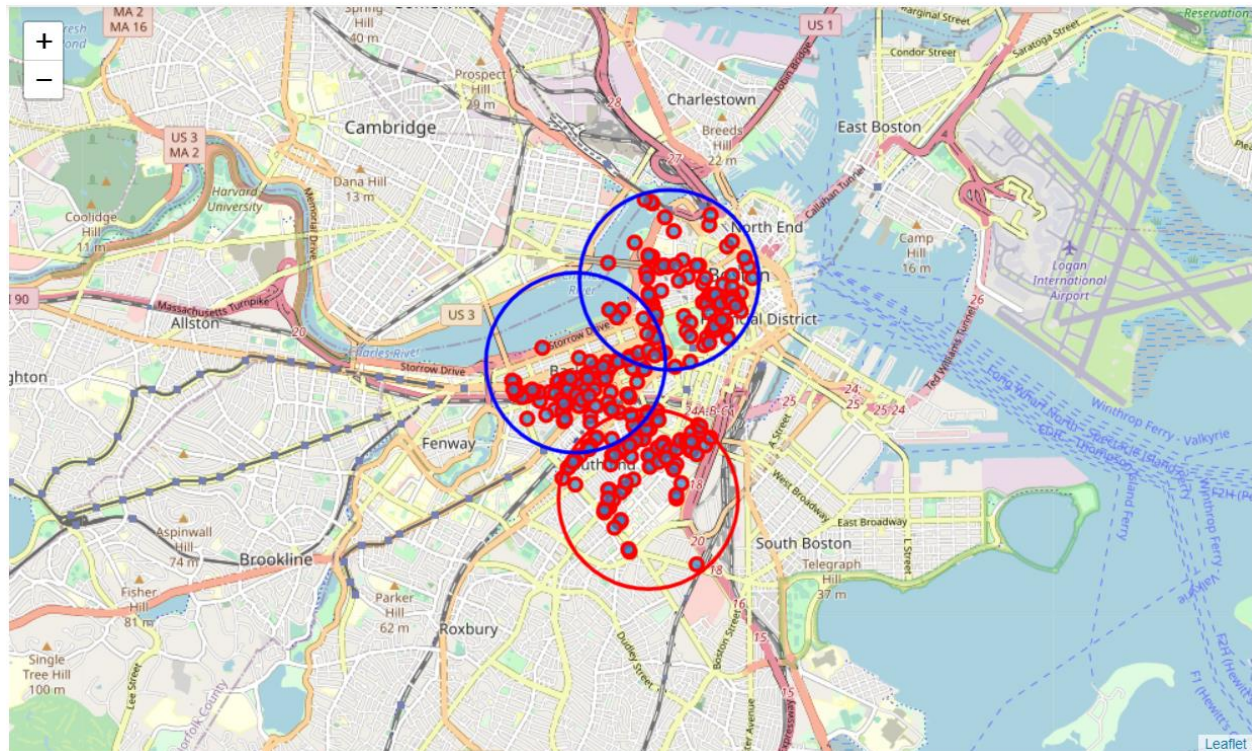

Table 5. Top Neighborhoods Scored with Top Venues Matched

Neighborhood	1st Most Common Venue	2nd Most Common Venue	3rd Most Common Venue	4th Most Common Venue	5th Most Common Venue	6th Most Common Venue	7th Most Common Venue	8th Most Common Venue	9th Most Common Venue	10th Most Common Venue	11th Most Common Venue	
South End	Italian Restaurant	American Restaurant	Wine Bar	French Restaurant	Wine Shop	Pet Store	Mexican Restaurant	Café	Gym / Fitness Center	Coffee Shop	Thai Restaurant	
Back Bay	Clothing Store	Seafood Restaurant	Spa	Park	Italian Restaurant	Coffee Shop	Gym	Bakery	Wine Shop	New American Restaurant	Mediterranean Restaurant	
Beacon Hill	Coffee Shop	Italian Restaurant	Hotel	Historic Site	French Restaurant	Pizza Place	Seafood Restaurant	Park	Steakhouse	American Restaurant	Boat or Ferry	
North End	Italian Restaurant	Park	Seafood Restaurant	Pizza Place	Hotel	Bakery	Coffee Shop	Historic Site	Sandwich Place	Yoga Studio	Aquarium	
South Boston	Coffee Shop	Pizza Place	Park	Convenience Store	Italian Restaurant	Diner	Beach	New American Restaurant	Furniture / Home Store	Breakfast Spot	Bar	
12th Most Common Venue	13th Most Common Venue	14th Most Common Venue	15th Most Common Venue	16th Most Common Venue	17th Most Common Venue	18th Most Common Venue	19th Most Common Venue	20th Most Common Venue	Main Score	Number of Matches	Match Score	Total Score
Park	Bakery	Japanese Restaurant	Gastropub	Mediterranean Restaurant	Pizza Place	Asian Restaurant	Bar	Gift Shop	1.000000	4	0.800000	0.900000
Shopping Mall	Plaza	Salad Place	Steakhouse	Ice Cream Shop	Hotel	Sushi Restaurant	Gym / Fitness Center	Jewelry Store	0.750000	5	1.000000	0.875000
Theater	Hotel Bar	Scenic Lookout	Bakery	Bar	Gym / Fitness Center	Market	Restaurant	Gourmet Shop	0.900000	4	0.800000	0.850000
Beer Garden	Boat or Ferry	American Restaurant	Greek Restaurant	Gastropub	Church	Boutique	Ski Chalet	Skating Rink	1.000000	3	0.600000	0.800000
Pub	Donut Shop	Dive Bar	Sports Bar	American Restaurant	Restaurant	Bowling Alley	IT Services	Ice Cream Shop	0.750000	4	0.800000	0.775000

I put together a map to visualize these neighborhoods with all the venues shown below (Map 3). The venues inside the red circle are within range of the top venue (South End). Check out the

notebook for a more interactive version of the map. Neighborhood names appear when you click on the circles and venues are labelled as well.

Map 3. Best Neighborhoods with All Venues

It is interesting to note that these neighborhoods are all close enough to have overlapping venues. This makes sense especially if key venues (such as Italian Restaurants) appear at the overlaps but that is out of the scope of this project. I did run this model a few times with different criteria and found that, more often than not, top neighborhoods were clustered close to each other. This could indicate that neighborhoods influence the cultures and venues of nearby neighborhoods. This is an interesting potential insight while out of the scope of this project, it could influence future projects that focus on neighborhood interactions and correlations.

V. Conclusion

It is often difficult to determine the best neighborhood to live in when moving to a new city on your own. Venue data when organized by neighborhood, grants insights which can be helpful when making such a decision. Initial visualizations give more insight into neighborhood trends, but a more refined model is required to gain actionable insights into which neighborhood a person should move to. A person's venue interests can be prioritized and compared to the venues available in each neighborhood in order to make a data-driven decision. In this example, with this person's criteria, this person should look at moving to the South End. If they have other requirements such as distance to work that might affect their decision, they could look at the other top neighborhoods recommended to them such as the Back Bay and Beacon Hill.

Regardless, this model helps a person to focus their apartment search on a few neighborhoods and prevents them from getting overwhelmed by the plethora of options.

VI. Appendix

Table A. Venues per Category

Venue Category	Count
Pizza Place	96
Park	88
Coffee Shop	86
Italian Restaurant	80
Bakery	68
American Restaurant	62
Café	59
Seafood Restaurant	50
Mexican Restaurant	48
Sandwich Place	48
Hotel	47
